Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALIGNMENTS

RESULT AAY27011 <u>,</u>

AAY27011 standard; peptide; 20 A

AAY27011;

24-SEP-1999 (first entry)

N-terminal fragment of anti-freeze protein from Lichen.

Antifreeze protein; AFP; Lichen; frozen food product; pasteurisation; sterilisation; freezing; frozen confectionery product; N-terminal.

Umbilicaria antarctica.

W09937673-A2.

29-JUL-1999.

23-DEC-1998; 98WO-EP08554

22-JAN-1998; 98GB-0001420

(UNIL) UNILEVER NV.

Byass LJ, Sidebottom CM, Smallwood MF;

WPI; 1999-444595/37

New isolated antifreeze protein obtained from Lichen, used for the preparation of food products, particularly frozen confectionery

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   this protein. The AFP can conveniently be used in food products, preferably in food products which are frozen or intended to be frozen. Especially preferred is the use of AFPs in products which are heated e by pasteurisation or sterilisation prior to freezing and in frozen confectionery products. Using the AFP ingredient, mixes can be frozen under quiescent conditions, e.g. in a shop or home freezer without the formation of unacceptable ice crystal shapes and hence with a texture different to products normally obtained via quiescent freezing. The present sequence represents a N-terminal fragment of an 24 kDa AFP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                     analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                sequences from the Coryneform bacterium Corynebacterium glutamicum. are useful for identifying the mutation point of a gene derived from mutant of coryneform bacterium, measuring expression amount and

                                                                                                                                                                  The sequence represents Mycobacterium tuberculosis Mtb-82 antigen. Compositions comprising at least 2 heterologous antigens, as a fusion protein, and vectors expressing the fusion proteins are used as vaccines to prophylactically immunise mammals (especially humans) against infection by Mycobacteria. The compositions contain at least 2 heterologous antigens that increase the serological sensitivity of individuals infected with tuberculosis, a disease frequently affecting patients with acquired immunodeficiency disease, AIDS.
                                                                                                                                                                                                                                                   Disclosure; Fig 16; 168pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27-SEP-2001.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WO200171042-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pharmaceutical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 26-MAR-2002 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                        interactions
```

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG175) and the encoded proteins
                                                                           Drosophila; developmental biology; cell signalling; insecticide;
                                                                                                                             Drosophila melanogaster polypeptide SEQ ID NO 23259.

The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential CC genes, themselves and the encoded proteins. The prokaryotes used are CC Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella CC pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The CC invention is also useful for the identification of potential new targets CC for antibiotic development. The antisense nucleic acids can also be used CC to identify proteins used in proliferation, to express these proteins, CC and to obtain antibodies capable of binding to the expressed proteins. CC The proteins can be used to screen compounds in rational drug discovery CC programmes. The antisense nucleic acid sequence is also useful to screen CC a wide variety of organisms. The present sequence represents an CC wide variety of organisms. The present sequence represents an CC Note: The sequence data for this patent did not form part of the printed spacelination but was obtained to clear the printed of screen and the printed sequence are proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT

                                                                                                                                                                                                                                    avirulent pathogen. A rice CDNA library was screened using the yeast two CD hybrid system with Arabidopsis NAPI cDNA as bait, and the rice proteins PNI proline rich NAPI interactor; AAB29749) and MNI (AAB29758) were identified as interacting with Arabidopsis NAPI. The rice CDNA library CDNA was then rescreened using rice PNI CDNA or rice MNI cDNA as bait. Rice CNHI and NH2 (NAPR homologues I and 2; AAB29750, AAB29751), nucleolin-like protein (AAB29752), PREG-like protein (AAB29753), and a protein with no CDNA homology (AAB29754) were identified as interacting with PNI CDNA homology (AAB29754) were identified as interacting with PNI CDNA homology (AAB29756) and RICE (BLI and GNL2 (Glutaredoxin homologues I and 2; CDNA homology (AAB29756) and rice MAPIA (a protein with homology to rat microtubule-associated protein; AAB29757) were found to interact with crice MNI protein. The invention additionally encompasses transgenic plants comprising an expression cassette encoding a protein of the by introducing the averages of the content of the conten
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The sequences are also useful in producing pharmaceutical compositions for treatment of pancreatic tumors. ANY73814-Y74252 represent protein fragments encoded by the human pancreatic tumor cDNA library derived expressed sequence tag (EST) sequences represented in

New nucleic acid encoding human DnaJ-like proteins - for diagnosis, treatment and prevention of cancer, immune disorders and inflammation

Claim 22; Fig 3A-D; 73pp; English.

This represents a human DnaJ-like protein, HSPJ2. The invention provides two human DnaJ-like proteins which are heat shock proteins J1 and J2 (HSPJ1 and HSPJ2) and nucleic acid sequences encoding the proteins. Host cells containing a vector comprising the nucleic acids are used for the production of recombinant proteins. Recombinant HSPJ1 and HSPJ2 are used to raise Ab, therapeutically and to screen for specific binding agents. Antagonists are used to treat or prevent a wide variety of solid cancers, leukaemia and lymphoma; immune disorders (typical of many disclosed are acquired immune deficiency syndrome, allergy, asthma, Crohn's disease, diabetes mellitus, multiple sclerosis, rheumatoid arthritis, microbial and parasitic infections) and inflammation. Agonists may be used to treat or prevent tissue damage, e.g. in cases of ankylosing spondylitis, heart attack, ischaemia, UV exposure, insulin-dependent diabetes and for wound

                                                                                                                          Sequences AAW94753-758 represent specifically claimed peptide fragments of a mutant measles virus H protein antigen isolated from the NA strain of measles virus. The invention provides mutant measles virus antigenic proteins such as the H protein from the CAM-70 (attenuated) or NA (epidemic) strain of measles virus and the F protein from the CAM-70 or NA strain and nucleic acid sequences encoding the proteins. These antigenic proteins and their fragments are used in the production of vaccines for measles and the production of diagnostic reagents (e.g. measles antigens for the detection of specific antibodies in the blood of patients). The vaccines may be recombinant or other live attenuated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                healing, and may be expressed from a vector containing the nucleic acids. Fragments of the nucleic acids are used as primers and probes for detecting and quantifying the HSPJ-encoding nucleic acid in usual hybridisation and/or amplification assays, therapeutically as antisense, triplex-forming or ribozyme molecules, and for chromosome mapping.

Shared amino acid variations in wild-type measles glycoproteins are identified in five wild-type measles viruses. A consensus polypeptide, the amino acid sequence of which reflects variation common to more than one wild-type strain, is the basis for constructing live attenuated vaccines, or recombinant vaccines to replace older, less efficacious vaccines. Immunological reagents useful in differentiating wild-type measles strains from other known strains can also be produced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Haemaglutinin;

                                                                                                                                                                                                                                                                             several wild-type measles strains are given. Shared amino acid variations in wild-type measles glycoproteins are identified in five wild-type measles viruses. A consensus polypeptide, the amino acid sequence of which reflects variation common to more than one wild-type strain, is the basis for constructing live attenuated vaccines, or recombinant vaccines to replace older, less efficacious vaccines. Immunological reagents useful in differentiating wild-type measles

Title: Perfect score: Sequence: US-09-582-296-1 98

1 APAWMDAESFGAIAHGGL 18

Scoring table: BLOSUM62 Gapop 10.0 , Gapext 0.5

Searched:

Total number of hits satisfying chosen parameters: 105224

105224 seqs, 38719550 residues

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

SwissProt_40:*

Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (JUN-1999) to the EMBL/GenBank/DBJ databases.

-I - FUNCTION: REQUIRED TO FACILITATE THE FORMATION OF CORRECT DISULFIDE BONDS IN SOME PERIPLASMIC PROTEINS AND FOR THE ASSEMBLY OF THE PERIPLASMIC C-TYPE CYTOCHROMES. ACTS BY TRANSFERRING ELECTRONS FROM CYTOPLASMIC THIOREDOXIN TO THE PERIPLASM. THIS TRANSFER INVOLVES A CASCADE OF DISULFIDE BOND FORMATION AND REDUCTION STEPS (BY SIMILARITY).

-I - SUBCELLULAR LOCATION: Integral membrane protein. Inner membrane

01-NOV-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (APR-1996) to the EMBL/GenBank/DDBJ databases.

- CATALYTIC ACTIVITY: ATP + L-asparagine + tRNA(Asn) = AMP + diphosphate + trasparaginy + tRNA(Asn),

-i- SUBCELLULAR LOCATION: Cytoplasmic (Probable).

-i- SIMILARITY: BELONGS TO CLASS-II AMINOACYL-TRNA SYNTHETASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright.
